

Lab # 01

Installation of Dev-C++ IDE and Execution of First C++ Program

Objective:

To install the Dev-C++ IDE on the computer and execute a simple C++ program successfully.

Software Requirement:

Dev-C++ IDE

Windows Operating System

Introduction:

Dev-C++ is an Integrated Development Environment (IDE) used for writing, compiling, and running C++ programs. It provides a user-friendly interface for beginners to easily learn programming.

Installation Steps:

- Download Dev-C++ from a trusted website.
- Run the setup file.
- Click Next to continue installation.
- Accept the license agreement.
- Choose installation location.
- Click Install and wait for completion.
- Click Finish to launch Dev-C++.
- Steps to Execute First C++ Program:
- Open Dev-C++.
- Click on File → New → Source File.
- Write the following program.
- Save the file with .cpp extension (e.g., first.cpp).
- Click Compile & Run (or press F11).

Program Code:

```
#include <iostream>
using namespace std;
int main() {
    cout << "Hello World";

    return 0;
}
```

Explanation:

```
#include <iostream> ? Includes input/output library
using namespace std; ? Allows use of standard functions
int main() ? Main function where execution starts
cout ? Displays output on screen
return 0; ? Ends the program
```

Output:

Hello World

Result:

The Dev-C++ IDE was successfully installed, and the first C++ program was compiled and executed correctly.

Conclusion:

We learned how to install Dev-C++ and run a basic C++ program. This is the first step toward learning programming

Lab Task

Code: 01

```
#include <iostream>
// Library used for input and output operations
using namespace std;
// Allows us to use cout without writing std::

int main() {
    // Main function where program execution starts

    cout << "Hello, World!";
    // Displays the message on the screen

    return 0;
    // Indicates that the program finished successfully
}
```
